The Lung Cancer Framework: A national resource to advance best practice lung cancer care in Australia

Innovations in Cancer Treatment and Care Conference
Sydney
13 September 2018

Dr Barbara Daveson
Acting Senior Manager, Cancer Care
Cancer Australia
Lung Cancer in Australia
Incidence, mortality, survival and burden

5th most commonly diagnosed cancer¹
9.2% of all new cancer cases¹

Leading cause of cancer disease burden²
19% of national cancer burden²

Leading cause of cancer death¹
9.2% of all new cancer cases¹

16% chance of surviving at least 5 years¹
Compared to 68% for all cancers combined¹

The Lung Cancer Framework

Aim

Improve the outcomes and experiences of people affected by lung cancer in Australia

- Support uptake of the *Principles for best practice lung cancer care in Australia*
- A national resource for health professionals and service providers
- Provide evidence-based, best practice information, strategies, tools and resources
The Lung Cancer Framework

The Principles

Principle 1
Patient-centred care

Principle 2
Timely access to evidence-based pathways of care

Principle 3
Multidisciplinary care

Principle 4
Coordination, communication and continuity of care

Principle 5
Data-driven improvements in lung cancer care

Principles for best practice lung cancer care

The Principles provide core information, elements and outcomes to support evidence-based approaches to improve the outcomes and experiences of people affected by lung cancer in Australia.
The Lung Cancer Framework
Development Methodology

Governance
- Lung Cancer Advisory Group
- Project Steering group(s)
- Clinical Leadership Group
- Consumer Reference Group

Principles for best practice management of lung cancer in Australia
Lung Cancer Demonstration Project (LCDP)
Systematic reviews
Rapid scoping
Qualitative and Quantitative synthesis
Lung Cancer Framework
National Lung Cancer Summit
